CWORKS FAQ - Technical Queries

10) **Can I make modifications to my database even though I purchased a standard version without source codes?**

A: **Yes. Only the source codes are locked. You can however still manipulate the data in database file. Double click the file and unlock the db by entering the admin password. Exit the application. Depress the shift key and double click on the file. It will now open up in design mode and you may manipulate the data there. However we do not recommend you to delete records because of data integrity reasons**.
